

OcNOS Data Center (DC)

February 2025

TOTAL NETWORK DISAGGREGATION

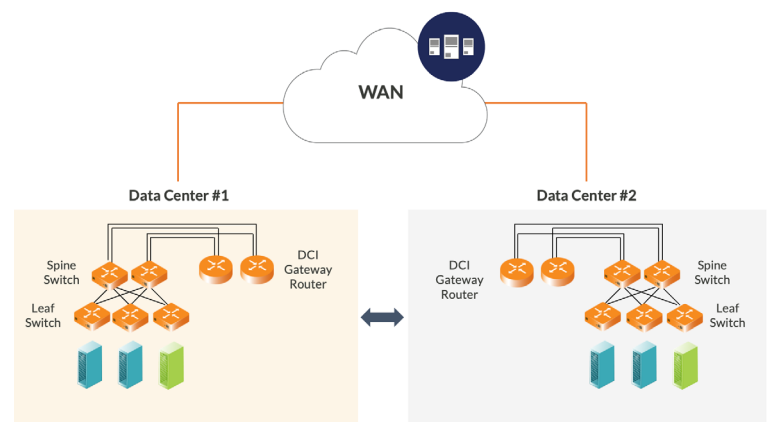

Take control of your network with Total Network Disaggregation from IP Infusion. Complex networks simplified with open standards.

OcNOS Data Center

Web-scale networking requires new solutions to build hyperscale and cloud data centers equipped with a web-scale operations toolset. IP Infusion's Network Operating System (NOS) running on open networking switches combines the key principles of best-in-class hardware and software. IP Infusion's Open Compute Network Operating System (OcNOS), with a rich set of control plane features, can be used to build next gen data center network, providing robust quality, facilitating AI/ML workload transfers, ensuring lower costs and at the same time providing vendors with a best-of-breed selection for hardware platforms.

A key concept that will enable next-generation Data Center networks is the separation of the networking software from the switching or routing hardware. One of the biggest advantages of disaggregation is CAPEX reduction, followed by OPEX savings and deployment flexibility.

OcNOS provides a unique value proposition in helping build modern Data Centers. It provides robust quality with over 600 OEMs and end users, with hundreds of thousands of deployments in solutions spanning access, core, transport and data center networking. It is a feature rich solution with extensive legacy and new protocol coverage.

OcNOS-AGGR is used as Data Center Interconnect (DCI) Gateway Router

OcNOS also drastically reduces operational costs as the same OS can be used across multiple solutions such as Data Center, Cell Site Router, and Provider Aggregation Networks.

OcNOS Software

OcNOS (Open Compute Network Operating System) is an industry-leading Network Operating System (NOS) providing the most complete carrier-grade disaggregated solution for data center and service provider networks. OcNOS-based solutions have been widely deployed in access, aggregation, transport and data center use cases for simplified operations and automation. It provides extensive programmability for end-to-end network management and orchestration. OcNOS features a single software image that runs across the entire portfolio of Open Compute platforms from leading vendors. This guarantees consistent operations, workflow automation and high availability, while significantly reducing operational expenses.

OcNOS provides industry standard CLIs, supports standard MIBs as well as the latest network management tools. Its integrated centralized management and provisioning layer allows for transaction-based configuration and device feature modelling. OcNOS is a modular, multi-tasking NOS, with tight integration capabilities on commodity hardware. This design allows for scaled and performance critical deployments.

OcNOS benefits include:

- Hardened carrier-grade solutions that are fully qualified with multi-vendor open networking platforms
- Breaks vendor lock-in
- Scalable software for terabit switching bandwidth
- Lower TCO: Up to 65-75% savings against Traditional Tier-1 vendors
- A broad ecosystem of technology and integration partners

OcNOS key highlights include:

- Packaged disaggregated networking solutions for faster deployment and shorter time-to-revenue
- Netconf and OpenConfig data models for network automation, orchestration, and control
- Industry standard CLI
- Streaming telemetry
- Flexible deployment: OcNOS solutions addressing different use cases across the data center and service provider networks
- World-class 24/7/365 support

OcNOS-DC Features, Services & Transport

Comprehensive Layer 2 Feature Support – VLAN, Link Aggregation, Provider Bridging, LLDP, MLAG, xSTP and Data Center Bridging (DCB)

Advanced Layer 3 Routing – BGP, RIP, OSPF, ISIS, BFD and VRRP

Complete Virtual Extensible LAN (VxLAN) – EVPN-MH (Multi-Homing), IRB (Integrated Routing and Bridging) anycast gateway, VxLAN-aware Quality of Service with IRB, ARP/ND cache and ARP suppression

AI/ML Networking – PFC, ECN and DCBX

Multicast Features – IPv4, PIMv6, IGMP and MLD

Quality of Service – The most comprehensive available on any disaggregated NOS

Security – Storm control, Flow control, DHCP Snooping, IP Source Guard, Dynamic ARP inspection, Access Control List

Management – SNMP: v1, v2, v3, Zero Touch Provisioning, sFlow, NETCONF, OpenConfig YANG data models, DHCP server/client/relay, CLI Commit /Rollback, NTP Client/Server, Management VRF/inband Management support, and gNMI telemetry streaming

Services

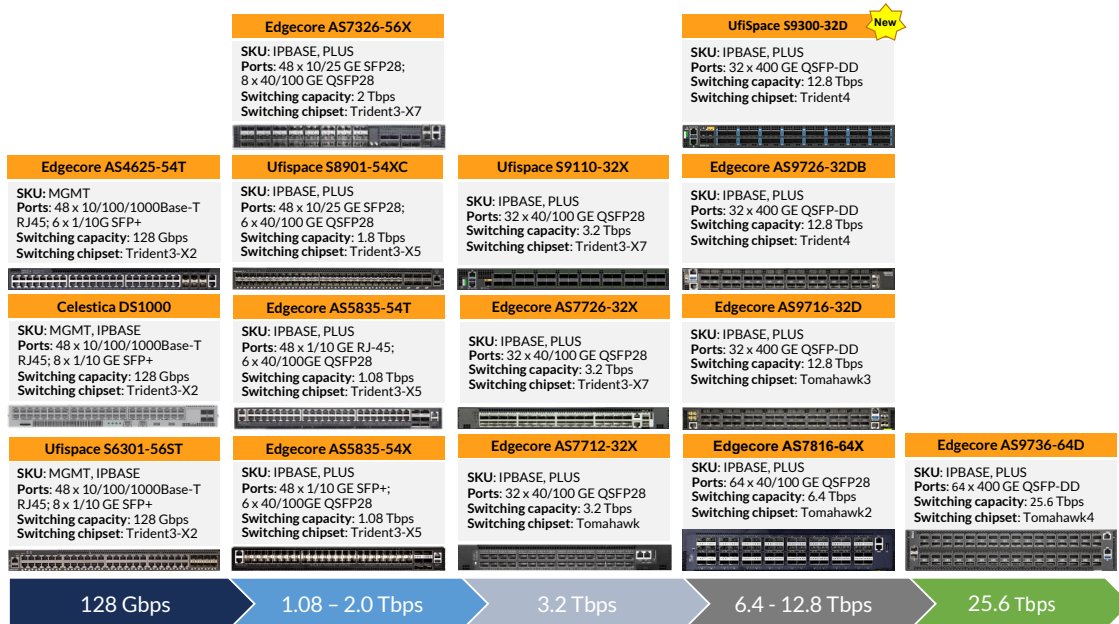

- Layer 2 and layer 3 overlay networks via EVPN-VxLAN with IRB unified connectivity solution
- Distributed anycast gateway
- EVPN all-active multi-homing
- EVPN-ETREE

Data Center Networks

- Fabric Extensibility: Ethernet, IP and Overlay
- CLOS Fabric
- Lossless transport of RDMA over Converged Ethernet v2 (RoCEv2)

OcNOS Data Center Hardware Platforms

The following hardware platforms are supported.
